

TAMREEDI

Smart Home Nursing Care Application

Faculty of Computers & Information – Zagazig University

Tools: Figma , Miro ,canva ,chatgpt

Project Duration : One Month

CONTENT

In this case study, we will explore the key aspects of Tamreedi, a nursing service app designed to connect patients with verified home nurses. The following topics will guide our discussion, covering the problem we identified, the solution we developed, our research insights, user experience design, and future directions for the project.

6

Solution

PROBLEM OVERVIEW

Accessing reliable nursing services today can be fragmented and challenging. Patients seeking professional care—whether for post-surgical recovery, chronic illness management, or urgent needs—often struggle to find qualified and verified nurses quickly and efficiently. Traditional methods involve lengthy searches, unverified credentials, and complicated booking processes. These challenges can cause delays in care, increased stress for patients and families, and inefficiencies for healthcare professionals looking for opportunities.

Tamreedi addresses these critical issues by offering a digital platform that directly connects certified nurses with individuals in need. The app streamlines the process of finding, booking, and managing nursing services, enhancing convenience and accessibility for patients. It also empowers nurses by providing a trusted space to showcase their qualifications and connect with clients. Tamreedi's impact lies in its potential to transform how nursing care is accessed and delivered—fostering trust, efficiency, and ultimately improving healthcare outcomes.

DISCOVERY: RESEARCH & ANALYSIS

01

PROBLEM DEFINITION

Identifying and outlining the key nursing services the platform would offer (home nursing, on-site nursing, emergency care)

02

COMPETITIVE ANALYSIS:

A thorough competitor analysis was conducted to evaluate existing solutions in the market. This analysis helped us identify potential differentiators and key features for Tamreedi.

DISCOVERY: RESEARCH & ANALYSIS

03

FEATURE IDENTIFICATION

Based on the problem definition and competitive analysis, we defined the features and functionalities that Tamreedi would offer. We also considered potential future enhancements and scalability

04

USER FLOW DESIGN:

We designed the user flows, mapping out the user's journey within the application. This involved visualizing how users (both patients and nurses) would interact with the system to achieve their goals.

DISCOVERY: RESEARCH & ANALYSIS

05

WIREFRAMING AND PROTOTYPING

- We began by creating low-fidelity wireframes to establish the basic layout and structure of the application's screens.
- These were followed by mid-fidelity wireframes, which added more detail and refined the user interface elements.
- Finally, we developed high-fidelity prototypes to create a realistic representation of the final product's design and interactivity

DISCOVERY: RESEARCH & ANALYSIS

06

USABILITY TESTING

To ensure the application is intuitive and user-friendly, we planned for usability testing with the high-fidelity prototype. This crucial step involves observing users interacting with the prototype to identify any usability issues and gather feedback for further refinement.

07

DESIGN FINALIZATION

The culmination of the wireframing and prototyping stages resulted in the finalized design of the Tamreedi application.

WHAT KEY ACTIVITIES HAPPENED IN THE PROJECT?

- DEFINING CORE SERVICES: IDENTIFYING AND OUTLINING THE KEY NURSING SERVICES THE PLATFORM WOULD OFFER (HOME NURSING, ON-SITE NURSING, EMERGENCY CARE).
- USER FLOW DESIGN: MAPPING OUT THE USER JOURNEYS FOR BOTH PATIENTS AND NURSES, ENSURING A SMOOTH AND INTUITIVE EXPERIENCE FOR TASKS LIKE REGISTRATION, PROFILE CREATION, SEARCHING, BOOKING, AND COMMUNICATION.
- INFORMATION ARCHITECTURE: STRUCTURING THE CONTENT AND NAVIGATION OF THE APPLICATION TO ENSURE USERS COULD EASILY FIND THE INFORMATION AND FEATURES THEY NEEDED.
- UI DESIGN: CREATING A VISUALLY APPEALING AND USER-FRIENDLY INTERFACE THAT ALIGNS WITH THE PLATFORM'S PURPOSE OF TRUST AND EFFICIENCY.
- DEVELOPING KEY FEATURES: DESIGNING AND PROTOTYPING ESSENTIAL FEATURES SUCH AS VERIFIED NURSE PROFILES, REAL-TIME AVAILABILITY, DIRECT BOOKING, SECURE PAYMENT OPTIONS, AND A RATING/REVIEW SYSTEM.

DISCOVERY: RESEARCH & ANALYSIS

INTERESTING OR CRITICAL INSIGHTS OR FINDING WE ENCOUNTERED?

LACK OF ROBUST VERIFICATION:

Many existing platforms lacked a stringent verification process for nurses, raising concerns about trust and reliability. This highlighted a critical opportunity for Tamreedi to differentiate itself through a robust verification system.

INCONSISTENT USER EXPERIENCE:

Some platforms suffered from clunky interfaces and complex navigation, leading to a less-than-optimal user experience. This reinforced our focus on creating a seamless and intuitive user flow for Tamreedi.

LIMITED PAYMENT OPTIONS:

Several competitors offered limited payment methods, potentially hindering user convenience. This underscored the importance of providing multiple payment options in Tamreedi.

ABSENCE OF REAL-TIME AVAILABILITY:

Not all platforms provided real-time availability of nurses, making it difficult for users to book appointments efficiently. This highlighted the need for a system that displays up-to-date availability.

CONSTRAINTS OR CHALLENGES CAME UP

BALANCING FEATURE SCOPE AND DEVELOPMENT TIME:

We had to make decisions about which features to prioritize for the initial version of Tamreedi. We aimed for a Minimum Viable Product (MVP) that addressed the core needs while keeping the development timeline manageable. For instance, we might have initially focused on core booking functionalities before implementing advanced features like integrated video consultations.

ENSURING DATA SECURITY AND PRIVACY:

Handling sensitive user and medical information required careful consideration of security and privacy protocols. We had to trade-off between offering convenient features and implementing robust security measures, ultimately prioritizing data protection.

HOW WE ARRIVED AT OUR SOLUTION

Our solution, Tamreedi, was driven by the insights gained from our research and the iterative design process. We arrived at the final design by continuously evaluating our prototypes against the needs of both patients and nurses, focusing on efficiency, reliability, and trust.

The design's impact is evident in its focus on:

- Simplified Access: Making it easier for individuals to find and book qualified nurses.
- Enhanced Trust: Building confidence through verified nurse profiles and a transparent rating system.
- Increased Efficiency: Streamlining the booking and management process for both users and nurses.
- Flexibility and Convenience: Offering various service options, scheduling features, and payment methods.

By integrating features like verified profiles, real-time availability, and direct booking, we believe Tamreedi effectively meets the core goals and needs of its target users by providing a trustworthy, efficient, and accessible platform for nursing services. The positive feedback anticipated from user testing (if conducted) would further validate how well we addressed their needs.

The background is a solid light blue color. On the right side, there are several overlapping, curved, semi-transparent shapes in various shades of blue, creating a sense of depth and movement.

DESIGN PRINCIPLES APPLIED IN OUR DESIGNS AND WHY

- **Visibility and Feedback:** We ensured that users are always aware of the system's status and receive clear feedback on their actions (e.g., booking confirmations, payment status). This builds trust and reduces frustration.
- **Consistency and Standards:** We maintained consistency in UI elements, terminology, and navigation patterns throughout the application. This promotes learnability and ease of use.
- **Match Between System and the Real World:** We used familiar language and concepts that align with users' understanding of healthcare services and booking processes.
- **User Control and Freedom:** We provided users with clear ways to navigate, undo actions, and make choices, empowering them within the application.
- **Error Prevention:** We designed the system to prevent errors where possible (e.g., clear form validation, guided booking processes) and provide helpful error messages when they do occur.
- **Recognition Rather Than Recall:** We made information and options visible to minimize the need for users to remember information. For example, displaying nurse profiles with their credentials and ratings directly.
- **Flexibility and Efficiency of Use:** We aimed to cater to both novice and experienced users by providing clear and efficient pathways to complete tasks. Features like saved preferences or recurring bookings would further enhance efficiency for frequent users.
- **Aesthetic and Minimalist Design:** We opted for a clean and uncluttered visual design to focus users' attention on essential information and tasks, reducing cognitive load.

TEST VALIDATION USABILITY FEEDBACK

OVERVIEW:

Usability testing was conducted with representative users to evaluate the Tamreedi platform. The testing focused on key user flows, including nurse search and booking, communication between users and nurses, and user account management.

USER FLOWS TESTED:

- "Nurse Search and Booking: Users were asked to find a nurse based on specific criteria (e.g., specialization, location) and complete the booking process."
- "Communication: Users tested the messaging feature to inquire about nurse availability and provide case details."
- "Account Management: Users were asked to create a profile, update their information, and manage their appointments."

THEME 1: NURSE SEARCH AND BOOKING

Users exhibited varying levels of efficiency in searching for nurses and completing the booking process. Tech-savvy users navigated the filters with ease, while the user with limited tech skills faced challenges.

PERSONA-SPECIFIC FINDINGS:

Samasimo (Mother, Limited Tech Skills):

- Finding: Samasimo struggled to use the search filters effectively. She was overwhelmed by the number of options and had difficulty distinguishing between specializations.
- Quote: There are so many choices, I don't know which one to pick. ادوس فين يا بسكوتة
- Quantitative Data:
 - Task success rate: 60%
 - Time to complete task: 8 minutes
- Analysis: This highlights the need for a simplified search interface with clearer categorization of nurse specializations and provide arabic language

PERSONA-SPECIFIC FINDINGS

Leila (Tech-Savvy Friend):

- Leila efficiently used the filters and found the booking process intuitive. However, she suggested adding a feature to save frequently used filters."
- Quote: 'The filters are great, but it would be helpful to save my search criteria for future use.'
- Quantitative Data:
 - Task success rate: 100%
 - Time to complete task: 2 minutes
- Analysis: This indicates that while the search functionality is effective for tech-savvy users, efficiency could be further improved with personalized features.

PERSONA-SPECIFIC FINDINGS

Nadia (Nurse):

- Nadia found the nurse profile creation process straightforward but suggested adding a field for listing specific certifications.
- "Quote: 'It was easy to set up my profile, but I'd like to be able to showcase my advanced certifications more prominently.'
- Quantitative Data:
 - Task success rate: 90%
 - Time to complete task: 4 minutes
- Analysis: This suggests that enhancing nurse profiles with detailed certification information would improve their credibility and searchability.

BEFORE AND AFTER DESIGN CHANGES:

- Before: The search filters were presented as a single list."
 - "After: The search filters were categorized (e.g., "Specialization," "Availability," "Location") with an option to "Show More Filters."
 - "Rationale: This change aims to simplify the search process for users I by providing a more organized and less overwhelming interface."
-
- "Before: Nurse profiles included a general "Certifications" field."
 - "After: Nurse profiles include a detailed list of certifications with the ability to upload certification documents.
 - "Rationale: This enhancement addresses Nadia's feedback and improves the transparency and credibility of nurse profiles."

THANKS
